

JavaScript Practice Questions

Topics: Strings, Arrays & Functions

Easy Level

1. String Length

Create a string containing your full name and display its total length.

2. Convert Case

Create a string and display it in:

- Uppercase
 - Lowercase
-

3. Remove Extra Spaces

Create a string with leading and trailing spaces. Remove the spaces using a string method and display the result.

4. Extract a Word

Create the string:

```
"I love JavaScript Programming"
```

Extract only the word **JavaScript** using the `slice()` method.

5. Replace a Word

Replace the word **Programming** with **Coding** in a sentence.

6. Student Names

Create an array containing five student names.

- Display the first student.
 - Display the last student.
 - Display the total number of students.
-

7. Add New Student

Create an array of fruits and add a new fruit at:

- The end of the array
 - The beginning of the array
-

8. Remove Items

Create an array of five colors.

- Remove the first color.
 - Remove the last color.
-

9. Combine Arrays

Create two arrays of numbers and combine them into one array.

10. Greeting Function

Create a function that accepts a person's name and displays:

```
Hello, Ali! Welcome to JavaScript.
```

Intermediate Level

11. Full Name Generator

Create a function that accepts first name and last name and returns the complete name using template literals.

12. Even or Odd Function

Create a function that accepts a number and returns whether it is Even or Odd.

13. Largest Number

Create a function that accepts two numbers and returns the larger number.

14. Shopping List

Create an array of shopping items.

- Add two new items.
 - Remove one item.
 - Display the final array.
-

15. Password Checker

Create a function that checks whether a password has at least 8 characters.

Return:

- "Strong Password"
 - "Weak Password"
-

Hard Level

16. Count Vowels

Create a function that accepts a string and counts the total number of vowels (a, e, i, o, u).

Example:

```
Input: "JavaScript"  
Output: 3
```

17. Reverse a String

Create a function that reverses a string without using the built-in `reverse()` method.

Example:

```
Input: "Hello"  
Output: "olleH"
```

18. Search in Array

Create an array of student names.

Ask the user for a name and display whether that student exists in the array.

19. Product Management

Create an array of products.

Perform the following operations:

- Add a new product.
 - Remove one product.
 - Replace one product.
 - Display the updated list.
-

20. Student Report System

Create:

- A function that accepts a student's name and marks.
- Store subject names in an array.
- Display the student's report using template literals.

Example Output:

```
Student Name : Ali
Subjects      : HTML, CSS, JavaScript
Marks        : 85
Result       : Pass
```
